Notes to designs

- The design uses a 960px grid, 12 columns, 5px gutter. You can toggle the grid as a layer in the photoshop file and also turn the guides on to see the gutter.

- Details page and Homepage are now in the same psd file. Just toggle the layers.

- I've removed the list page, as it was just a repeat. You don't have to code this page anymore.

- Try to create the buttons for the site in css, don't cut them out from the psd.

- The slider spans the whole width of the page, the left/right buttons should sit at the edge

- The footer color also spans the full width

- The font used is "Source Sans Pro" and is available for free download from google fonts. Some body text is also in Arial.

- Remember rollover states for buttons and links (e.g. color change)

- Make all obvious text links tags e.g. in the footer About us

- Happy coding ...
